IN THE CLAIMS:

Please replace the existing claims with the following set of claims:

1. (currently amended) A method for inhibiting lipase activity in a mammal related to control animals, said method comprising the step of:

by orally feedingadministering to said the mammal an avian antibody that binds—decreases activity of lipase relative to a control, wherein said control does not receive said avian antibody in the gastro-intestinal tract of said mammal.

- 41. (cancelled)
- 42. (cancelled)
- 43. (cancelled)
- 44. (new) A method of decreasing lipase activity in feed, said method comprising the step of:

adding together a known amount of lipase and a quantity of antilipase antibodies, wherein the activity of said known amount of lipase is decreased by approximately 5% to approximately 50%.

45. (new) The method of claim 44, wherein a ratio by weight of said known amount of lipase to said quantity of antilipase antibody comprises less than 0.12.

Page 7 of 13

46. (new) The method of claim 44, wherein a ratio by weight of said known amount of lipase to said quantity of antilipase antibody comprises less than 0.028.

47. (new) A method of controlling weight gain in mammals by limiting lipase activity, said method comprising the step of:

administering a quantity of antilipase antibody to the mammals, wherein said quantity of antilipase antibody requires an increase of more than approximately 35% in food intake to increase weight of the mammals by 1 gram.

- 48. (new) The method of claim 47, wherein said quantity of antilipase requires an increase of more than approximately 450% in food intake to increase weight of the mammals by 1 gram.
- 49. (new) The method of claim 47, wherein said antilipase antibody comprises avian antilipase antibody.
- 50. (new) The method of claim 47, wherein said step of administering comprises orally administering said antilipase antibody.

Appl. No.: 08/888,202 Filed: July 7, 1997 Atty. Docket No. 29940-RA

Page 8 of 13

51. (new) The method of claim 50, wherein said step of orally administering comprises orally administering said antilipase antibody in combination with the mammal's feed.

52. (new) A method of monitoring weight change in mammals resulting from decreased lipase activity, said method comprising the steps of:

measuring the body weight of said mammals before and after feed intake, wherein said mammals receive antilipase antibody;

measuring the body weight of controls before and after feed intake, wherein said controls do not receive antilipase antibody;

feeding said mammals and said controls, wherein said mammals' feed contains antilipase antibodies; and

calculating a quantity of feed required for said mammals to gain a selected unit of body weight.

53. (new) The method of claim 52, further comprising the step of feeding comprises feeding said quantity of antilipase antibody in a liposomal preparation.

Appl. No.: 08/888,202 Filed: July 7, 1997 Atty. Docket No. 29940-RA

Page 9 of 13

54. (new) The method of claim 52, wherein said quantity of antilipase antibody is collected from the yolks of eggs from chickens.
